

Check your timing chips!

Many riders purchased the AMB timing chips from the CCTTA several years ago. While we are told these chips have a very extended life and we have had very good success with the timing equipment, it is important to check your chip for its signal strength at least annually. All of those chips are currently out of warranty with AMB.

You can easily check your timing chip by going to the start line 15-30 minutes before the first rider goes off. Slowly approach the timing wire and listen for a beep as you get within a couple feet. The beep indicates that your chip is still good.

If you have problems with your chip please see someone in Registration for assistance.

A rider who uses a rental chip does not need to test his chip!

The registration staff tests each rental chip immediately before being issued to the rider.
